🏆 1️⃣ Production 3-Tier Web Application

Build:

- VPC / VNet
- Public & Private Subnets
- NAT Gateway
- Load Balancer
- Auto Scaling / VMSS
- App Layer
- Database (RDS / Azure SQL)
- Security Groups / NSGs
- Remote backend (S3 + DynamoDB / Azure Storage)

Covers:

Networking + Security + State + Modules + Scaling

👉 This is MUST.

🏆 2️⃣ Kubernetes Infrastructure (AKS / EKS)

Build:

- Cluster
- Node groups
- IAM roles
- VNet integration
- Ingress controller
- Monitoring

- Container registry

Covers:

Advanced infra + IAM + modules + provider alias

🏆 3️⃣ Multi-Environment Setup (Dev / Test / Prod)

Build:

- Workspaces or separate state
- Same infra across environments
- Variable-driven configs

Covers:

Workspaces + environment separation + DRY principle

🏆 4️⃣ CI/CD Integrated Terraform Deployment

Build:

- GitHub Actions / Azure DevOps pipeline
- terraform plan approval
- automated apply
- state locking

Covers:

Automation + pipeline integration

5 Secure Network Architecture

Build:

- Bastion host
- Private VMs
- NAT Gateway
- Private endpoints
- Route tables
- Zero public DB access

Covers:

Real-world security best practices

6 Serverless Architecture

Build:

- Lambda / Azure Functions
- API Gateway
- Storage
- IAM roles
- Monitoring

Covers:

Event-driven infra + IAM complexity

🏆 7️⃣ Observability Stack

Build:

- Monitoring
- Logging
- Alerting
- Dashboards

Covers:

Cloud monitoring infra + integrations

🏆 8️⃣ Blue-Green Deployment Infra

Build:

- Two app environments
- Load balancer switching
- Zero downtime updates

Covers:

Lifecycle + advanced architecture thinking

🏆 9️⃣ Cross-Account / Multi-Subscription Infra

Build:

- Multiple provider blocks
- Cross-account IAM roles
- Shared services VPC

Covers:

Aliased providers + enterprise design

🏆 🔟 Disaster Recovery Setup

Build:

- Multi-region replication
- Backup storage
- Failover architecture

Covers:

High availability + replication + production thinking

🧠 If You Build At Least These 5:

- 3-Tier App
- Kubernetes Infra
- CI/CD Integrated Terraform

- Secure Network Setup
- Multi-Environment Setup

You're not beginner anymore.

You're production-ready.

🎯 Ultimate "Terraform Mastery" Project

Build this combo:

✓ Multi-env 3-tier infra

✓ Remote backend

✓ Modules

✓ CI/CD pipeline

✓ Autoscaling

✓ Monitoring

✓ DR

Put it on GitHub with architecture diagram.

That's resume gold.
