

3 DevOps Projects to Build This Weekend

1. Build a Microservices Application (Beginner)

- Start this if you already know basic scripting & how apps are delivered.
- You will begin by learning Docker, Kubernetes architecture, and how microservices interact.
- This project will help you build your foundation to understand clusters, pods, services, and deployments.

2. Cloud-Native Voting App Deployment (Intermediate)

- A UI-based app — great to showcase in your portfolio.
- You'll learn multi-service deployment, scaling, and ingress setup.
- Common interview reference for practical Kubernetes use cases.

3. vLLM Deployment on Kubernetes (Advanced Level)

- ↳ Deploy high-performance LLM inference workloads.
- ↳ Understand GPU-based model serving patterns.
- ↳ Integrate AI workloads into Kubernetes infrastructure.
- ↳ Explore scalable inference architectures.

Example: github.com/kubernetes/examples/tree/master/AI/vllm-deployment

Focus on how ML inference systems integrate with container orchestration platforms.
